The Call Park button operates in 2 modes. First, it can be used to park the active call that you are on. When not on a call, you can also press the Call Park button to view all of your parked calls currently on your system.

Parking a Caller

While on a call with someone, press the Call Park button to park the caller.

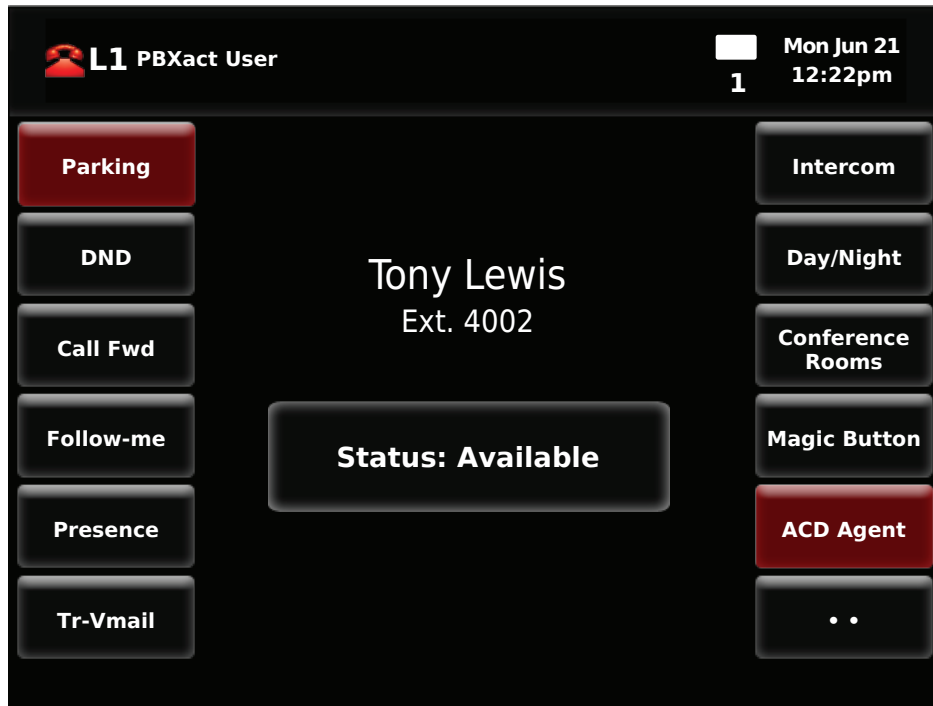

The slot number that the caller was parked in will be announced to you on your phone. By default, this should be 71 through 79.

Now any user can dial this parking slot number from their phone that the call was parked in or press the Call Park button to view and retrieve parked calls.

Retrieving a Parked Call

You can simply dial the parking slot number, such as 71, where a call was parked. If you are unsure what slot number that caller was parked in, you can press the Call Park button.

You will now notice a list of all parked calls with the slot number and Caller ID of each caller that is parked on the system.
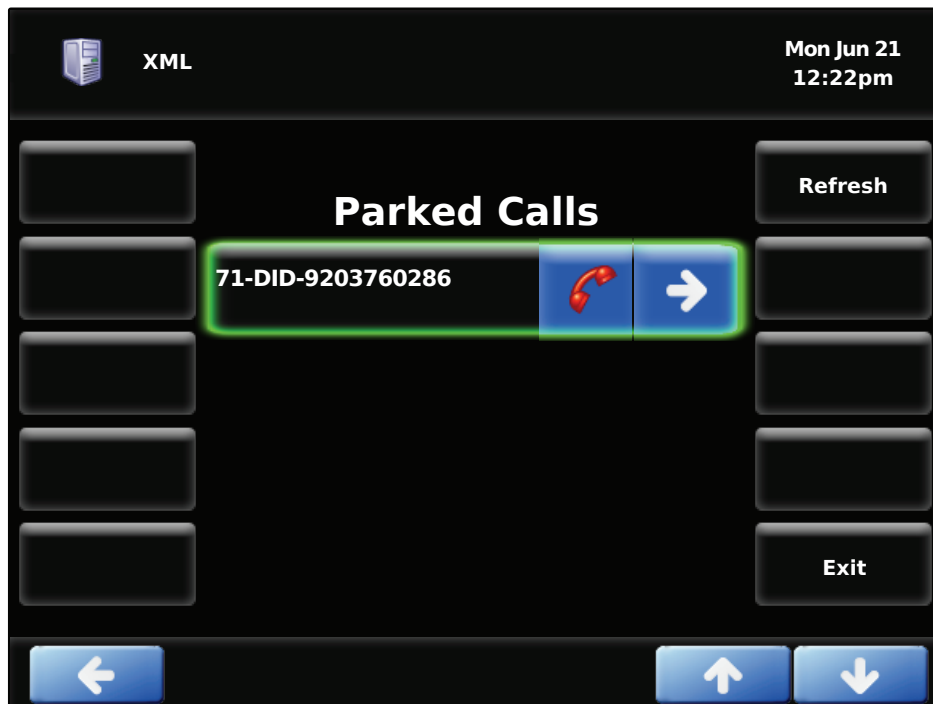

Using the up/down keys, you can highlight any caller and press the Pickup button to connect yourself with the caller.
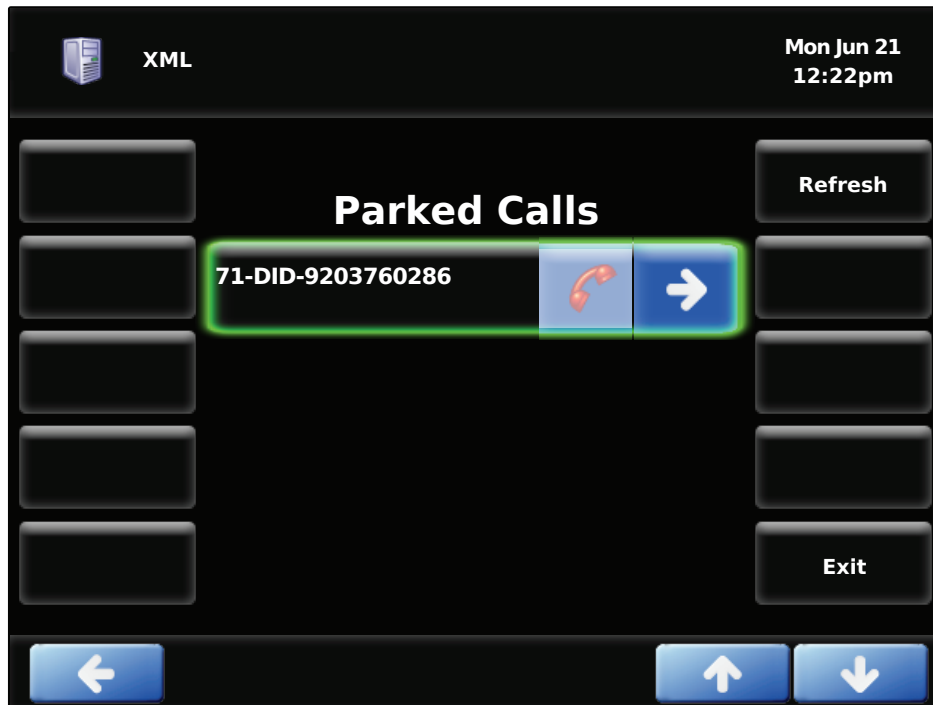

You can also press the Refresh button to get an updated list at anytime.
