A Reliable Fax Solution from Schmooze Communications

A Reliable Fax Solution from Schmooze Communications

PBXact offers a robust inbound, outbound fax server that can be added to any PBXact phone system without purchasing any additional hardware.

But how does this compare to any other PBX?

The PBXact XactFax service is a reliable, robust inbound outbound faxing server. You simply enable faxing for any user of the system. Then point a phone number to a specific fax user and let us answer the fax call. We will then convert the incoming fax to a PDF and email it to the user. Optionally you can have the system also store the faxes locally on the system and allow the users to view and delete the faxes on your PBXact system.

Outbound faxing can be done through a web interface on your PBXact system. Simply type in a phone number and upload a PDF. You can optionally set the outgoing PDF to use a locally stored Fax Coversheet with your faxes and type in a personal message on the coversheet.

What do I get as part of the XactFax package?

You receive the following:

-  Individual inbound fax to email accounts for unlimited users.
-  Outbound faxes for PDF's
-  Simple Web interface to manage inbound and outbound faxes.
-  Have all inbound and outbound faxes stored on the server for easy viewing and archiving.
-  Create company wide fax coversheets that allow easy customization for each user.

Note: The XactFax service requires the use of analog or PRI phone lines for reliable fax service.
